This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

+ *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.

+ *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.

+ *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.

+ *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. It will be observed that the business of the Office has greatly increased during the past year, and it is now increasing in a steady ratio. With this increase of business there is, of course, a corresponding increase in the receipts of the Office, the amount paid in during the year ending December 31, 1883, being $1,146,240.00, which is $137,020.55 in excess of the amount received during the year 1882, and $471,005.14 in excess of all expenditures by and for the bureau during the year last past.

AN INCREASE OF FORCE NECESSARY.

I wish, in connection with the above exhibit, to respectfully call the attention of Congress to certain facts, which I trust may have some influence in securing the adoption of such measures as will in the future remove all just cause for the complaints that reach me from all

quarters and sections of the country touching the delay in dispatching the business which comes to this bureau.

I am daily in receipt of communications severely censuring the honorable Secretary and the Commissioner for not employing such additional force as is necessary to bring and keep the work of the bureau up to date. The impression seems to prevail that since the patrons of the Office have provided the funds for the prompt disposition of their business, some blame attaches to the Department or to this Office for not applying the money to the purpose for which it was received. I am daily appealed to by Senators and Members to make applications special, on the ground that if an examination is delayed until the case is reached in its regular order the value of the patent may be in large measure lost to the inventor. Although well disposed to oblige my friends, I cannot, without violating a well-considered rule of the bureau, comply with these requests. I know these delays are not only vexatious, but in some instances very disastrous to the interests involved. There is no valid reason why a single application should remain a week in the Office without being taken up for action, and as little excuse for compelling assignees of interests in patents to wait several months before their deeds can be recorded. Parties entitled to copies of records, which are indispensable as evidence on the trial of pending causes, are compelled to wait several weeks before they can be furnished.

The examining corps is greatly behind with its work simply because it is a physical impossibility with the number employed to keep it up. It has frequently been suggested that the force of the Office does not accomplish as much as ought to be required of it. Since I have taken charge of the Office I have been at pains to ascertain if those employed in the bureau are unfaithful or shirk duty in any wise. I note first that under the rules of the Office shirking is next to impossible, and absence in excess of the thirty days authorized by statute (unless in case of sickness) is not allowed, except in rare instances, and without pay. I am satisfied that no private employer in the country has more faithful and excellent service from his employés than is rendered by those employed in this bureau. There are exceptions, but they are very few, and, I may add, that in such cases what the individuals lack in earnest effort in the discharge of duty here they endeavor to make up by exceptional activity in securing influence and indorsement to induce the Department to retain them in the service and promote them.

It is evident that the Government never intended to make the Patent Office a source of revenue. It was and is desired to make it self-sustaining, and the fees were fixed and are as low as was and is deemed compatible with the possibility of providing ample revenue to secure all necessary facilities of every kind and character for the prompt and thorough dispatch of the business properly coming before it. Not a cent of money expended, directly or indirectly, for the support and maintenance of the Patent Office is raised by taxation. Every dollar is paid by those who have business before the Office—the inventors of the country. It is beyond question that not only the inventors and those immediately interested in inventions, but the great body of the people as well, are interested in having the business of this bureau done promptly and thoroughly. The inventor does not want a worthless patent, nor are the people willing to pay a royalty when none can be justly claimed, nor do they wish to go into the courts to test the validity of a patent. The inventor not only wants to know whether he is legally entitled to a patent for the subject-matter of his application, but he desires and is entitled to have the question speedily determined.

To provide ample accommodations and a thoroughly-competent corps of examiners, clerks, and needful help, the inventors have paid to the Government a sufficient fund, which is held in trust for that purpose. Under these circumstances I respectfully submit that force enough should be employed to dispatch the business of the bureau thoroughly and without needless delay. The present force is utterly inadequate, nor will the increase suggested by my predecessor be sufficient.

INCREASE IN SALARIES.

I concur in what my predecessor said in his report, dated September 14, 1883, to the honorable the Secretary of the Interior in regard to salaries. The examining corps in this bureau should be composed of men of first-class ability and undoubted integrity. It is of consequence to inventors and to the people at large that patents should not be improvidently issued. The examining corps must, in the main, be relied upon to prevent this. Not one patent in fifty comes under the personal supervision of the Commissioner or his assistant. The examiners determine these important questions in the first instance, and in a great majority of cases *first* and *finally*. The Government, I submit, can afford (especially when inventors provide the funds) to pay as full compensation for first-class ability and strict integrity as a private individual or corporation. The experience of the Office is, that it is next to impossible to secure, with the hope of retaining for more than a short period, assistant examiners whose thorough fitness renders them especially valuable to the service. They are constantly leaving to accept more lucrative employment outside. Since every conceivable advantage is on the side of *just*, not to say *liberal*, compensation, I trust it may please Congress to adopt the suggestions of my predecessor and provide the increase of salaries indicated in the estimates submitted, as well as for the increase of the force employed.

ROOM.

I cannot refrain from repeating what Mr. Commissioner Marble said in regard to the rooms occupied by the bureau. They are inadequate. I am compelled to keep valuable documents and records piled on the floor; some are in rooms so damp that the papers are moldy.

Many of the employés occupy small, dark, and damp rooms, and in numerous cases their health has been seriously impaired. Within a few years the entire building now occupied by the Department of the Interior will be required by this Office for the proper accommodation of its force and the safe keeping of its records and files.

Very respectfully, your obedient servant,

BENJ. BUTTERWORTH,
Commissioner.
